

ASSIGNMENT 2B

TASK ASSIGNMENT

Data Visualization & Insight Storytelling

Turn raw data into charts that decision-makers can act on.

VISUALIZE

N A R R A T E

SUBMIT

Dear Intern,

I hope you've completed your previous assignment on data exploration and have a good feel for working with datasets. We'll now move to the next stage of our workflow — **converting data into visual insights** and meaningful narratives.

CONTEXT

Raw data alone isn't enough. Decision-makers rely on clear visualizations and concise insights to understand problems and act — your role now is to transform data into visual representations that communicate findings effectively.

IMPORTANT · A NOTE ON APPROACH

You may use Generative AI tools (ChatGPT, Gemini, etc.) to get guidance on charts or structuring. However:

This task requires you to **create actual visualizations** using tools.

AI-generated descriptions or copied charts **will not meet expectations**.

Your submission must demonstrate **your own chart creation** and interpretation based on the dataset.

YOUR TASK

Convert your dataset into visual insights and a data-driven story.

Three charts. Three insights. One narrative.

INPUT FOR THIS TASK

Pick one of the following datasets to work with:

- 1 Your **cleaned dataset from Assignment 2A**
- 2 A dataset **provided by your instructor**

01

Create visualizations

Build at least **3 charts** from your dataset, such as:

- **Trend chart** — e.g., energy usage over time

- **Comparison chart** — e.g., building-wise consumption
- **Distribution chart** — e.g., range of values

EACH CHART NEEDS

Proper labels

Units included

Easy to read

02

Derive insights

For each visualization:

- Write **one clear insight**
- Focus on **what the data is telling you** — not just what the chart shows

03

Build a narrative

Tie your visualizations together with a simple flow:

Problem » Data » Insight

For each insight, briefly explain:

- **What is happening**
- **Why it matters**
- **What could be done** (a basic suggestion)

DELIVERABLE

A 3-5 slide deck or dashboard

Tell a clear story with three pieces:

- 1 **3 visualizations** from your dataset
- 2 **One insight** for each visualization
- 3 **A short narrative** connecting them

SUGGESTED TOOLS

Microsoft Excel / Google Sheets

Power BI / Tableau (optional)

Python (matplotlib / seaborn, optional)

TIMELINE

72 hours

RECEIVED

DEADLINE

SUBMISSION GUIDELINES

File format

PPT / PDF or dashboard link

File name

YourName_DataVisualization

EVALUATION FOCUS

Quality and clarity of visualizations

Relevance of insights

Ability to connect data to a narrative

Overall structure and communication

IMPORTANT REMINDER

This task **cannot be effectively completed using AI tools alone**. Strong submissions will reflect:

- **Actual chart creation**
- **Logical interpretation**
- **Clear communication of insights**

This assignment prepares you for the next phase, where you'll begin **designing solutions based on data insights**.

Please share your **feedback** using this form Link - [Feedback form link](#)
